Subject: Updates to ArcaBook Multicast Specifications for Equities

The NYSE Arca Client Connectivity Group has made changes to the ArcaBook Multicast Specification for Equities (latest updates in version 2.7 of the specification). NYSE Arca customers will need to verify that their code has been updated to reflect these changes, including recent changes included in versions 2.5 and 2.6 of the specification. Changes include:

- All Imbalances for a specific multicast group can be requested by specifying '0' (zero) in the SymbolIndex and SessionID fields
- Added correct TCP Source IP Address
- New values for RetransFlag

Full details as well as other minor corrections and clarifications can be found in the Document History section of the most recent version of Specification 2.7:

- http://www.nyse.com/pdfs/ArcaBook_Multicast_Spec.pdf
- <http://www.nyxdata.com/nysedata/default.aspx?tabid=710>

If you have any further questions, please contact the Client Connectivity Group at 888.689.7739 or connectivity@nyx.com.
