Subject: NYSE MatchPoint Connectivity Update

Pending SEC approval, NYSE MatchPoint will be a portfolio-based, point-in-time electronic exchange facility that matches aggregated orders at predetermined times with no market impact. NYSE MatchPoint has been designed to provide the optimal solution for liquidity discovery by creating a centralized exchange-neutral matching environment. The matching facility is based on a sophisticated algorithmic model that will maximize the NYSE Euronext global infrastructure and liquidity relationships.

NYSE MatchPoint will provide the best environment for finding natural opaque block liquidity. Complete control of order information and execution will remain in the hands of Users.

Accessing NYSE MatchPoint is fast and easy. Users can submit single orders or upload multiple baskets of orders through FIX version 4.2 or the NYSE MatchPoint web-based front end. Orders may be transmitted from member firm desks, member firm Direct Market Access (DMA) and Execution Management System (EMS) platforms, member firm algorithm services or member firm sponsored linkages. Sponsored Participants of NYSE MatchPoint that have direct access may connect through the same linkages.

Connecting to NYSE MatchPoint

You can use your existing NYSE Arca FIX connection, existing Secure Financial Transaction Infrastructure (SFTI) network connection, or a secure internet session to gain access to the NYSE MatchPoint facility.

If you require new connectivity to NYSE Arca or SFTI, you will need to contact the FIX Support Group at 888-689-7739 or email fix@nyse.com.

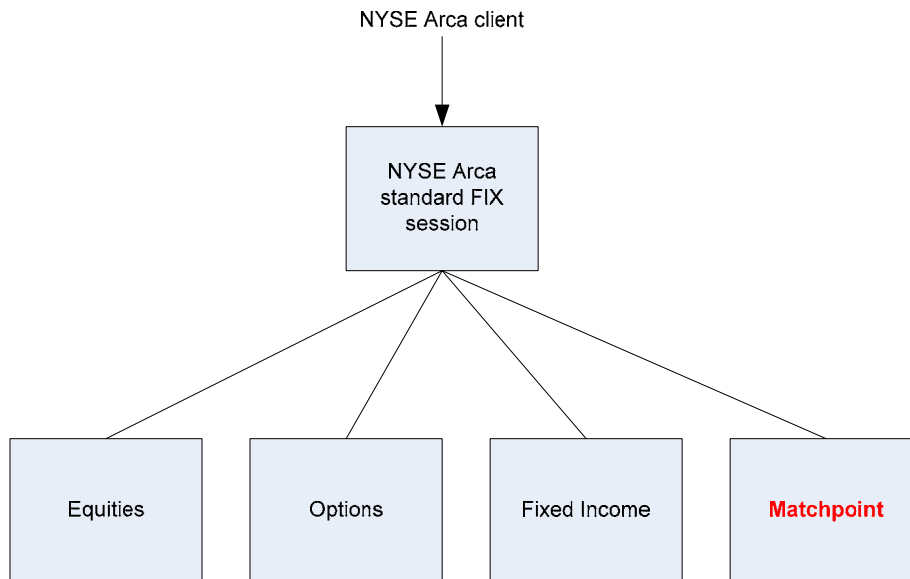

NYSE MatchPoint Web-based Front End

The NYSE MatchPoint web-based front end is password protected and uses the HTTPS secured communication protocol. It can be accessed over the SFTI network or over the internet using an RSA encrypted key. Authorized NYSE MatchPoint Users can submit single orders or multiple baskets; apply share, cash and internal matching constraints as well as access their order and execution report information. If you are interested in using the web-based front end, please call Client Services at 888.679.7739, option 3.

NYSE MatchPoint FIX Access

NYSE MatchPoint is accessible over the same standard FIX gateway that is used for access to our equities markets. The FIX implementation is similar to what is used for our other exchange platforms. You can even use the same FIX sessions you currently have in place at NYSE Arca if you choose to do so. You can find the MatchPoint FIX specification on our website at:

http://www.nyse.com/pdfs/MatchPoint_FIX_Specifications.pdf

Support and Testing

If you have questions, during the development process you can contact the FIX Support Group at 888-689-7739 or email fix@nyse.com.

NYSE Arca offers an ad hoc test platform for clients to test their applications before the certification process begins. Contact the FIX group if you are interested in setting up a test session.

Prior to going into production with your MatchPoint application you will be required to certify your application using our automated “ARCA cert” test tool. Call the FIX hotline for a session and instructions on how to use the platform. Once you have completed certification, the FIX group will work with you to get you setup in production.
