NYSE Technologies provides high-performance global trading platforms, through innovative market-leading software and a low-latency secure global network. Our flexible and scalable products deliver robust and integrated solutions for all market participants, from single traders to exchanges. From a single provider, these can be offered as fully deployed, hosted, managed or on-demand services.

Through the NYSE Technologies' Secure Financial Transaction Infrastructure (SFTI) network you can gain universal access to the network and facilities infrastructure of the world's leading markets.

The SFTI Community is an industry first, offering customers global connectivity coupled with innovative third-party technology solutions. With hundreds of firms already accessing global financial markets through the SFTI network, the SFTI Community allows participating firms to quickly and easily "plug in" to access the value-added products and services offered by a broad range of technology providers.

The introduction of the SFTI Community marks a major innovation in the development, distribution and accessibility of financial services technology. It is a first-of-a-kind system that will allow customers to be part of the most innovative technology environment complemented by superior connectivity to the largest, most accessible global liquidity pool in the world.

Trading firms gain one-stop connectivity to markets, with a choice of technology at every stage of workflow. By renting electronic trading capability rather than running these systems in-house, you can realize cost savings and keep up with the latest technology enhancements. Whether your firm requires access to exchanges, market data, non-exchange venues or specific counterparties, the SFTI Community provides a total solution by coupling trading tools with its leading network.

There are multiple access solutions to suit your needs, connecting directly via backbone or through extended reach with extranet partners.
