

Due to a potential error in the calculation of Final Percentage Hidden, the accuracy of the relevant B.I.a calculation fields described below for NYSE National, Inc. (NSX), and reported by the NYSE Group for the period covering April 2016 - January 2017 (a period in time prior to NSX's acquisition by NYSE Group), cannot be verified and NYSE Group cannot identify the reason for any such potential discrepancies in the data:

1. B.I.a.(5) Hidden Status = 2 (Not Displayable):

For some observations, B.I.a.(30) Final Percentage Hidden is less than 100%. This occurs in August 2016.

2. B.I.a.(5) Hidden Status = 0 (Entirely Displayable):

For some observations, B.I.a.(30) Final Percentage Hidden is greater than 0. This occurs every month from April 2016 - January 2017.

3. B.I.a.(13) Shares Executed at an Away Trading Center = 0:

For some observations, B.I.a.(30) Final Percentage Hidden is greater than B.I.a.(29) Original Percentage Hidden. This occurs from April 2016 - January 2017.

Because the NYSE Group cannot determine the root cause(s) of the discrepancies described above, it is possible that the underlying error(s) that produced the aggregated data discrepancies may affect a larger number of observations than the number of observations directly captured by these discrepancies.
