## 1. Introduction

---

Daily TAQ (Trades and Quotes) is a set of files that contain all trades and quotes for all issues listed and traded on US regulated exchanges for a single trading day. The Daily TAQ data is derived from the output of the CTA and UTP SIPs (Tape A, Tape B, and Tape C).

The SIP data is published between 4:00am-8:00pm every trading day.

The NYSE Daily TAQ archive goes back to 1993. Historical data is available for download.

Customers can obtain a license to access specified months of historical data, or a license for ongoing access to the current Daily TAQ files.

For details, contact [DataSales@nyse.com](mailto:DataSales@nyse.com)

### 1.1 FILE CONTENT

One day's set of Daily TAQ files includes:

DAILY TAQ FILE	CONTENT
<b>Master File</b>	Master information for all symbols published by CTA and UTP
<b>Trades File</b>	All trades published by CTS and UTDF
<b>Quotes (26 files)</b>	All quotes published by CQS and UQDF (records are grouped into files alphabetically by symbol)
<b>NBBO File</b>	All National Best Bid and Offer updates published by CQS and UQDF
<b>Quote LULD File</b>	All Limit-up/Limit-down Price Band messages published by CQS and UQDF
<b>Trade LULD File</b>	All Limit-up/Limit-down Price Band messages published by CTS and UTDF
<b>CTA Admin File</b>	All administrative messages published by CTA
<b>UTP Admin File</b>	All administrative messages published by UTP

#### 1.1.1 Typical File Sizes and Availability

Daily TAQ files are created and become available after the close of US equities markets on the same day.

Guidelines on typical file size and availability are shown in the chart below. File sizes, number of rows, and availability times shown below are estimates based on recent trading volumes. History availability dates are exact.

All times are in US Eastern time.

DAILY TAQ FILE	FILE SIZE COMPRESSED	TYPICAL NUMBER OF RECORDS	TYPICAL FILE TIME AVAILABILITY	FILE AVAILABILITY DEADLINE	HISTORICAL DATES AVAILABLE

### 1.1.2 Availability Notifications

If today's Daily TAQ files are delayed beyond its deadline for whatever reason, a notice will be published to customers no later than 2am.

To register to receive product news and/or operational status notifications for all proprietary data products, visit <https://www.nyse.com/subscriptions>

Trader updates and announcements are available at: <https://www.nyse.com/trader-update/history>.

## 1.2 SFTP SERVER NAME

The name of the SFTP server is:

[sftp.nyse.com](https://sftp.nyse.com)

In order to establish your connection to the SFTP, NYSE needs your dedicated source IP address(es) and SSH Key(s). Please provide this information on the customer dashboard by visiting [dashboard.theice.com](https://dashboard.theice.com) and navigating to "SFTP Access Settings". For additional information, please refer to the [NYSE SSH Key Generation Guide](#).

For additional information regarding accessing the NYSE SFTP, please refer to the [NYSE SFTP Access - User Guide](#).

All Daily TAQ files are compressed using gzip.

## 1.4 FILE FORMAT

Every Daily TAQ file

- Is in ASCII format
- Is compressed using gzip.
- Starts with a Header Record and ends with a Trailer Record:
  - The Header Record is a pipe-delimited list of the names of all the fields in the data records in this file.
  - The Trailer Record has the same number of pipe-delimited fields as this file's data records:
    - Field 1      The word "END", without quotation marks
    - Field 2      An 8-character date (YYYYMMDD)
    - Field 3      The number of records in this file, not counting the header

and trailer

- Fields 4 to the end are blank (empty)

Every record in a file between the Header and Trailer records

- Represents a single event published by CTA and UTP
- Consists of a sequence of pipe-delimited ASCII fields specified in this document
- Is terminated by a newline character ('\n')

## 1.5 FIELD FORMATS

### 1.5.1 Symbols

Symbols are expressed in NYSE Symbolology, which consists of

Root (6 chars maximum), space, and Suffix (10 chars maximum)

See the [NYSE Symbolology Specification](#) for details.

The Master File also includes the symbols in the original formats published by the SIPs. For CTA symbols, see [CTS Binary Output Spec](#) Appendix B. For UTP symbols, see [Nasdaq 5<sup>th</sup> Character Suffix List](#).

Test Symbols are included in the Daily TAQ files. For the identification of Test Symbols, See [CTA Specifications for CTA Symbols](#) and the [NASDAQ-Listed for UTP Test Symbols](#)

### 1.5.2 Prices

Every price field represents a dollar amounts with an optional fractional component. A price consists of up to 14 ASCII numeric characters of whole value (with no leading zeroes), an optional decimal point ('.'), and up to 6 ASCII numeric characters of fraction (with no trailing zeroes). The whole field can be a maximum of 21 characters.

### 1.5.3 Sequence Numbers

For Tape C symbols (published by the UTP SIP), Daily TAQ sequence numbers are typical message sequence numbers as they appear in the UTP feeds, incrementing by 1 with every message.

For Tape A and B symbols (published by the CTA SIP), sequence numbers are derived from two different CTA fields: Block Sequence Number (appearing in the Block Header) and Message ID (appearing in the Message Header). For this reason, sequence numbers for Tape A and B symbols do not increase continuously. The formula for the Daily TAQ Sequence Number is:

$$\text{Daily TAQ Sequence Number} = (\text{CTA Block Sequence Number} * 100) + \text{CTA Message ID}$$

	Example 1	Example 2	Example 3
CTA block seq num	1	24	4,567
Message ID	3	39	5
Daily TAQ sequence number	103	2,439	456,705

### 1.5.4 Timestamps

Current timestamps are a fixed length field of ASCII numeric characters in the following format:

*HHMMSSxxxxxxxxxx*

HHMMSS represents two-digit values for hours, minutes and seconds since midnight, and the 9 x's represent a nine-digit nanosecond value.

### 1.5.5 Timestamp History

The accuracy of timestamps published by the SIPs has improved in steps over time, with CTA and UTP on different schedules from each other. Timestamps in Historical Daily TAQ reflect this evolution. For consumers of historical Daily TAQ, here is the dated change list for SIP timestamps.

*Timestamps are durations since midnight, e.g., seconds since midnight, nanoseconds since midnight*

DATE OF CHANGE	UTP CHANGES	CTA CHANGES
January 1993	<b>seconds</b> HHMMSS	<b>seconds</b> HHMMSS
October 2003	<b>milliseconds</b> HHMMSSxxx	<b>milliseconds</b> HHMMSSxxx
July 27, 2015	<b>microseconds</b> HHMMSSxxxxxx	
August 3, 2015		<b>microseconds</b> HHMMSSxxxxxx
October 24, 2016	<b>nanoseconds</b> HHMMSSxxxxxxxxxx	<b>microseconds</b> HHMMSSxxxxxx000
September 18, 2017		<b>nanoseconds</b> HHMMSSxxxxxxxxxx

If from an Exchange: Timestamp 1 denotes the Exchange Matching Engine Publication timestamp for a transaction. Exchanges use a clock sync methodology ensuring that timestamps are accurate within tolerances of 100 microseconds or less. Exchanges provide the timestamp in terms of nanoseconds since Epoch.

### 1.5.6 Blank Fields vs. Space Characters

When a field has no meaningful content, it is generally left blank, meaning there are no characters between the delimiting pipe characters. Occasionally a field has a set of SIP-defined values which includes a space character as a valid value, usually meaning not applicable or normal. In this case, the field will contain a space character (ASCII 0x20) between the delimiting pipe characters.

Blank	
Space	

### 1.5.7 Fields from One SIP Only

Certain fields contain data that is only published by one of the two SIPs: i.e., published by CTA and not by UTP, or vice-versa. In these cases, the description of the field is marked CTA or UTP as appropriate. Unless otherwise specified, such a field will be blank for records originating with the

other SIP.

## 1.6 ABBREVIATIONS

TERM	MEANING
BBO	Best Bid and Offer
LULD	Limit Up – Limit Down
MWCB	Market-Wide Circuit Breaker
NBB	National Best Bid
NBO	National Best Offer
NBBO	National Best Bid and Offer

## 5. Daily TAQ NBBO File

The Daily TAQ NBBO file is a record of all quotes that cause the NBBO to change. The file shows the exchange and quote that caused the change and also provides the NBBO and the exchange(s) that is/are currently setting the NBBO.

The Daily TAQ NBBO File is sorted by symbol, time, and message sequence number.

Please note that the NBBO file also includes the quote from the exchange that resulted in the NBBO changing, but this may not represent the NBB or the NBO. There can be multiple exchanges that quote at the NBBO. When more than one exchange is quoting the best price (NBB and/or NBO), the exchange with the largest quoted size will be credited with setting the NBB/NBO. If there is more than one exchange with the same quoted size, then the oldest quote sets the NBB/NBO.

This file does not allow you to determine the total number of round lots across all exchanges at the best price. To calculate that, you would need to find all exchanges that have a best bid or best offer in the Consolidated Quote file that matches the national best bid (offer) price and add up the bid (offer) sizes for those quotes from the individual exchange quotes.

Rights ordinarily have market values of their own and are traded actively. In most cases they must be exercised within a relatively short period of time.
<b>Stamped</b>	Indicates rights and privileges different from securities of the same issue, class, or series not stamped.

<b>Warrant</b>	A certificate giving its holder the right to purchase securities at a stipulated price, either within a specified time limit or in perpetuity.
<b>When Distributed</b>	A short form of “when, as, and if distributed” (see ‘When Issued’).
<b>When Issued</b>	A short form of “when, as, and if issued”; indicates a transaction in a security authorized for issuance, but not yet issued. All “When Issued” transactions are on an “if” basis, to be settled if and when the actual security is issued.
<b>With Warrants</b>	A security with a warrant attached that entitles the holder to purchase another security at stipulated price(s), either within a specified time or in perpetuity. Warrants may be immediately detachable from their underlying securities or detachable after specified periods.
<b>Without Warrants</b>	A security from which the warrant(s) has been removed.
