## TABLE OF CONTENTS

# 1. TAQ for Pillar Integrated, BBO, Trades and Imbalance Products

## 1.1 OVERVIEW

In NYSE Group nomenclature, the term TAQ simply denotes a historical data product.

The TAQ XDP Products are a historical record of all data that was published by the NYSE XDP feeds on a particular day.  Each TAQ XDP product corresponds to a single NYSE XDP real time feed.

Feed TAQ data is available on an end-of-day basis in flat file format, enabling you to recreate the market for any given time. On a per-market basis, the following feeds are available in TAQ format:

| PRODUCT | MARKETS |
|---------|---------|
| **TAQ NYSE Integrated Feed** | NYSE, NYSE American, NYSE Arca, NYSE National, NYSE Chicago |
| **TAQ NYSE BBO** | NYSE, NYSE American, NYSE Arca,  NYSE National, NYSE Chicago |
| **TAQ NYSE Trades** | NYSE, NYSE American, NYSE Arca, NYSE National, NYSE TRF, NYSE Chicago |
| **TAQ NYSE Order Imbalances** | NYSE, NYSE American, NYSE Arca |

## 1.2 ACCESS AND DATA FORMAT

All TAQ XDP product files consist of newline-terminated records in ASCII CSV format.  The files are compressed using GNU Zip, and can be downloaded using either of the delivery methods below:

1. Files can be accessed via AWS Cloud S3 using an AWS Account. Additional instructions may be found here.
2. Files can be downloaded via SFTP on the NYSE File Transfer Site, sftp.nyse.com.

For information on file paths and filenames, see Appendix B.

Note that previously, two formats were supported:  this CSV format, and a pipe-delimited zipped format. The pipe-delimited format has been eliminated.

Each record in the TAQ file corresponds to a single data event in the real time feed.  TAQ file records are in the same order as the data events were in the real time feed.

This appendix covers normal cases.  For full detail on exception cases, see Rule 7.35P.

**Indicative Match Price Details**

- The Indicative Match Price is the price that maximizes executable volume of auction-eligible shares, subject to Auction Collars.
- It includes the non-displayed quantity of Reserve Orders.
- If two or more prices maximize executable volume equally, in an effort to maintain continuity, the Indicative Match Price is whichever price is closest to the Reference Price.
- The final auction execution price is the Indicative Match Price at auction time.
