

### Functional Differences – NYSE Group Equities Platforms

This document provides a comparison of functional behaviors across NYSE Group equities markets. As of April 2018, four markets are trading on the NYSE Pillar platform, including Tape B&C securities on NYSE.

The next phases of NYSE Pillar, pending rule approvals, will be the migration of NYSE primary listed symbols (Tape A) to the NYSE Pillar platform and the introduction of NYSE Pillar Gateways to NYSE (see updated protocol specifications at <http://nyse.com/Pillar>). As Tape A symbols on NYSE migrate to the NYSE Pillar Platform, there will be functional changes from the current NYSE Equities UTP. To ensure consistent behavior across our equities markets, we will also introduce similar functional changes to the other markets currently trading on the NYSE Pillar Platform.

- **Standard Pillar Feature/Behavior** - track changes show functional changes that will become effective on ALL NYSE Pillar markets upon rollout of the new release, according to a schedule to be communicated via Trader Updates. For existing markets on Pillar (NYSE Tape B&C, NYSE Arca, NYSE American, NYSE National) these changes are denoted where applicable by: \* See changes in Standard Pillar column.
- **NYSE Pillar - Tape A Symbols via CCG/Binary CCG Gateways** - column shows functionality that will become effective as Tape A symbols on NYSE migrate from the legacy NYSE UTP platform to the NYSE Pillar platform. This column may be compared with the other columns to determine differences between the NYSE UTP platform and the existing NYSE Pillar implementations - NYSE Tape B&C, NYSE Arca Equities, NYSE American Equities, and NYSE National.
- **Functional Category Hashtags** (embedded in far left column) - have been added to assist readers in searching for functional differences relevant to their particular business. The categories consist of #General, #Gateways, #OrderHandling, #MarketData and #Auctions.
